PRODUCT DESCRIPTION

Purpose & Benefits of the Airlo 8 Pump

The Airlo 8 Pump is designed to provide effective pressure management when used with compatible alternating pressure mattress systems. This pump assists in redistributing pressure to reduce the risk of pressure ulcers, making it ideal for individuals who are bedridden or require long-term care. The pump's efficient design allows for smooth operation, while its adjustable pressure settings ensure personalised comfort and support for patients in hospitals, care facilities, or home environments.

Features

- **Alternating Pressure System:** Designed to work with an alternating pressure mattress system, the pump helps to relieve pressure points, reducing the risk of pressure ulcers and enhancing patient comfort.
- **Adjustable Pressure Settings:** Offers multiple pressure levels, allowing caregivers to customise the settings based on the patient's specific needs and preferences.
- **Quiet Operation:** Engineered for minimal noise, the Airlo 8 Pump operates quietly, ensuring that patients can rest comfortably without disruption.
- **Compact and Lightweight:** The pump is compact and easy to install, making it convenient for use in various care settings and easy to transport or store.
- **Durable Construction:** Built from high-quality materials for long-term reliability, ensuring consistent performance in demanding care environments.
