PRODUCT DESCRIPTION

Purpose & Benefits of NuRoo Pocket

The NuRoo Pocket is a specially designed babywearing shirt that facilitates skin-to-skin contact between a newborn and a parent. This innovative product supports the practice of "kangaroo care," which is known to promote newborn development, enhance bonding, regulate the baby's body temperature, and facilitate breastfeeding. The NuRoo Pocket ensures the baby is held securely and comfortably against the parent's chest, providing a womb-like environment that can help soothe and calm the baby. It's ideal for use from the moment of birth, offering an easy and comfortable way to practice skin-to-skin contact in the early postpartum period.

Features

- **Secure Design:** The shirt includes a built-in support belt that fastens securely, ensuring the baby is snug and safe against the parent's body without the need for additional wraps or carriers.
- **Soft, Breathable Fabric:** Made from a moisture-wicking, breathable fabric that keeps both the parent and baby cool and comfortable.
- **Full Coverage:** Provides full coverage for the parent, allowing for skin-to-skin contact without exposure, making it convenient for use in various settings.
- **Ease of Use:** Designed to be easy to put on and take off, simplifying the process of babywearing and promoting frequent kangaroo care sessions.
- **Adjustable Fit:** Accommodates changes in the parent's postpartum body and the growing baby, ensuring a custom fit as both baby and parent change.
- **Machine Washable:** Easy to care for by machine washing, supporting hygiene and ease of maintenance.

Specifications

- **Material:** Durable, stretchable fabric that is soft against the baby's skin and offers breathability and moisture-wicking properties.
- **Sizes Available:** Extra Small / Small, Medium, Large / Extra Large, 2-XL Large
- **Care Instructions:** Machine washable and dryer safe for easy cleaning.
- **Recommended Age/Weight:** Suitable for newborns from birth up to the age recommended by pediatric guidelines for skin-to-skin contact.
