

PATIENT HANDLING LOW FRICTION GLOVES - PAIR

\$22.00

SKU: PH-SS-G

PRODUCT DESCRIPTION

PURPOSE & BENEFITS

Patient Handling Low Friction Gloves are a unique and practical tool designed for caregivers and healthcare professionals. They facilitate the safe and efficient movement or repositioning of patients, particularly in hospitals, aged care, or home care settings. These gloves help reduce the physical strain on caregivers while ensuring comfort and dignity for the patients being assisted.

FEATURES

- **Low-Friction Material:** The gloves are made from a special low-friction fabric that reduces resistance when sliding or moving a patient, making repositioning tasks easier and more efficient.
- **Enhanced Grip:** They often feature grip areas or are constructed from materials that provide a secure hold, reducing the risk of hand slippage and improving control during patient transfers.
- **Durable Construction:** Designed to withstand regular use in a healthcare setting, the gloves are made from robust materials that can endure frequent washing and disinfection.
- **Ergonomic Design:** The gloves are shaped to fit comfortably over the hands of the caregiver, reducing hand fatigue and enabling more effective support and maneuvering of the patient.
- **Size Variability:** Typically available in different sizes to accommodate various hand sizes, ensuring a snug and comfortable fit for all caregivers.
- **Ease of Use:** Easy to put on and take off, facilitating quick and efficient patient handling as required.

Patient Handling Slide Gloves are an essential item in the toolkit of any caregiver or healthcare professional. They provide an added layer of safety and efficiency in patient handling, reducing the physical effort required to move or reposition patients while also protecting the patient's skin from

shear and friction forces. These gloves contribute significantly to safer and more dignified patient care.
