

PELICAN SLING LEG SHEARING SLEEVES

\$124.00

SKU: 564

PRODUCT DESCRIPTION

Purpose & Benefits

Sling Leg Shearing Sleeves are designed to reduce the risk of skin shear and friction when lifting patients using slings, especially for those with fragile or high-risk skin. These sleeves provide a soft, protective barrier between the patient's legs and the sling straps, helping to prevent skin breakdown, bruising, and discomfort during transfers.

Ideal for use in hospitals, aged care, and home settings, the sleeves are easy to apply and remove, and are machine washable for convenient hygiene management. They can be used with most standard sling designs and are an essential comfort and safety accessory for individuals prone to pressure or shearing injuries.

Features

- Helps prevent skin shearing and bruising during hoist transfers
- Soft, cushioned fabric provides a protective barrier
- Designed to fit over sling leg straps
- Suitable for frail or high-risk skin
- Easy to put on and remove

- Machine washable for repeated use
- Compatible with most patient slings
- Ideal for hospitals, aged care, and home use
