

RESMED AIRFIT F30 ULTRA-COMPACT FULL FACE MASK

\$308.00

SKU: 6412-H

PRODUCT DESCRIPTION

RESMED AIRFIT F30 PURPOSE & BENEFITS

Small, quiet and designed for freedom, the Resmed AirFit F30 [CPAP mask](#) delivers full-face functionality in an ultra-compact format. With nothing on your nose, there's no risk of red marks or discomfort on the bridge of your nose.

Key Features

- The under-the-nose design means freedom from red marks on the bridge of your nose.
- Sophisticated elbow features quick-release technology for easy connection and disconnection at night and 360 rotation capability for greater good freedom of movement.
- QuietAir vent gently diffuses exhaled air to minimise noise and disturbance, making it one of ResMed's quietest full-face masks.
- Convenient, intuitive magnetic clips guide the headgear to the frame in seconds for a mask that's fast to fit and easy to take on and off.

If you're looking for a full face mask that's smaller and more modern yet still reliable, AirFit F30 may be right for you. Its UltraCompact cushion rests under your nose rather than over it, covering less of your face, and making it feel more open. This unique design also prevents discomfort that can sometimes happen when the mask rests against the top of your nose.

Buy this ResMed AirFit F30 Full Face Mask online at MediMart using Afterpay or [NDIS method](#) today!

Warning

Keep the mask magnets at a safe distance of at least 6 inches (150 mm) away from implants or medical devices that may be adversely affected by magnetic interference. This warning applies to you or anyone in close physical contact with your mask. The magnets are in the frame and lower headgear clips, with a magnetic field strength of up to 400mT. When worn, they connect to secure the mask but may inadvertently detach while asleep. Implants/medical devices, including those listed within contraindications, may be adversely affected if they change function under external magnetic fields or contain ferromagnetic materials that attract/repel to magnetic fields (some metallic implants, e.g., contact lenses with metal, dental implants, metallic cranial plates, screws, burr hole covers, and bone substitute devices). Consult your physician and manufacturer of your implant / other medical device for information on the potential adverse effects of magnetic fields.
