PRODUCT DESCRIPTION

PURPOSE & BENEFITS

The Resmed AirFit N20 is a compact nasal mask for CPAP sleep apnea therapy, designed to fit everyone. Comfort and freedom through innovative technology. Easy to use, unobtrusive, suitable for all types of sleep therapy.

Designed to fit any face shape or size, the AirFit N20 moves comfortably with you through the night, providing a secure fit and comfortable seal tailored to your therapy needs.

KEY FEATURES

- Thanks to its innovative silicone cushion, AirFit N20 is designed to deliver a robust seal for all facial shapes, sizes and ethnic backgrounds.
- our advanced InfinitySeal™ silicone cushion adjusts to your movements for comfort and security throughout the night.
- with a ResMed mask this simple (magnetic clips, quick-release elbow), fitting it and keeping it clean are easy as 1, 2, 3.
- The under-the-eye frame design provides stability, minimal facial contact and unrestricted vision designed to help you see more, do more and feel great.
- a short flexible tube interconnects the elbow to the machine tube, allowing you to move more easily without encountering tube drag or leakage.
- the flexible frame is lined with plush fabric so it's soft on your skin and remains comfortable throughout the night.
- extensive user testing, ground-breaking technologies, thoughtful design: we did the hard work so you can enjoy a hassle-free and simple experience.

- AirFit N20 delivers performance with high pressure, Bi-level and NIV therapies as well as standard CPAP.

Warning

Keep the mask magnets at a safe distance of at least 6 inches (150 mm) away from implants or medical devices that may be adversely affected by magnetic interference. This warning applies to you or anyone in close physical contact with your mask. The magnets are in the frame and lower headgear clips, with a magnetic field strength of up to 400mT. When worn, they connect to secure the mask but may inadvertently detach while asleep. Implants/medical devices, including those listed within contraindications, may be adversely affected if they change function under external magnetic fields or contain ferromagnetic materials that attract/repel to magnetic fields (some metallic implants, e.g., contact lenses with metal, dental implants, metallic cranial plates, screws, burr hole covers, and bone substitute devices). Consult your physician and manufacturer of your implant / other medical device for information on the potential adverse effects of magnetic fields.
